

## Loading / Relief Valve 1486 – 1493

**Type:** Spring Loaded Diaphragm Type.

**Wetted Parts:** Stainless Steel or uPVC

**Diaphragm:** PTFE

**P. Max** 10 Bar

**Applications:**

**Relief Valve:**

An essential component to protect plant and personnel – mounted on tee in pump discharge pipe with outlet piped to safe location.

**Loading Valve:**

Required to ensure accurate flow rates where inadequate discharge pressure is available in the system or negative differential pressure is present. Also beneficial with long pipe runs where momentum of liquid causes overrun past pump valves.
